

Washington Vascular Plant Review List 2- 2015

This list includes species for which our current information is insufficient to evaluate conservation status; the Washington Natural Heritage Program is currently gathering sighting information on these species.

Nomenclature, including classification of families, generally follows the Washington Flora Checklist.

Species name	Common Name	Family Name	Global Rank	State Rank
<i>Balsamorhiza deltoidea</i>	Puget balsamroot	Asteraceae	G5	S2?
<i>Corispermum americanum</i> var. <i>americanum</i>	American bugseed	Amaranthaceae	G5?T5?	SU
<i>Erigeron</i> sp. novum (E. "instillauratus")		Asteraceae	GNR	SNR
<i>Hedysarum boreale</i> var. <i>mackenziei</i>	Mackenzie's northern sweetvetch	Fabaceae	G5T5	SNR
<i>Lomatium</i> sp. novum (Kittitas Co.)		Apiaceae		SNR
<i>Lupinus lepidus</i> var. <i>cusickii</i>	prairie lupine	Fabaceae	G5T1	SU
<i>Packera</i> sp. novum (Garfield Co.)		Asteraceae		SNR
<i>Pedicularis bracteosa</i> var. <i>siifolia</i>	towering lousewort	Orobanchaceae	G5T1T3	SNR
<i>Penstemon rydbergii</i> var. <i>oreocharis</i>	Rydberg's penstemon	Plantaginaceae	G4G5T3T5	SNR
<i>Phlox speciosa</i> subspecies		Polemoniaceae	GNR	SNR
<i>Ranunculus</i> sp. novum (Klickitat Co.)		Ranunculaceae	GNR	SNR
<i>Silene</i> sp. novum		Caryophyllaceae		SNR
<i>Solidago missouriensis</i>	Tolmie's goldenrod	Asteraceae	G5T3?	S1S3

Global Rank characterizes the relative rarity or endangerment of the element world-wide.

G1 = Critically Imperiled - At very high risk of extinction or elimination due to very restricted range, very few populations or occurrences, very steep declines, very severe threats, or other factors.

G2 = Imperiled - At high risk of extinction or elimination due to restricted range, few populations or occurrences, steep declines, severe threats, or other factors.

G3 = Vulnerable - At moderate risk of extinction or elimination due to a fairly restricted range, relatively few populations or occurrences, recent and widespread declines, threats, or other factors.

G4 = Apparently Secure - At fairly low risk of extinction or elimination due to an extensive range and/or many populations or occurrences, but with possible cause for some concern as a result of local recent declines, threats, or other factors.

G5 = Secure - At very low risk of extinction or elimination due to a very extensive range, abundant populations or occurrences, and little to no concern from declines or threats.

GH = Possibly Extinct - Known from only historical occurrences but still some hope of rediscovery.

GU = Unrankable - Currently unrankable due to lack of information or due to substantially conflicting information about status or trends.

GX = Presumed Extinct - Not located despite intensive searches and virtually no likelihood of rediscovery.

GNR = Unranked - Global rank not yet assessed.

G#G# = Range Rank - A numeric range rank (e.g., G2G3, G1G3) is used to indicate uncertainty about the exact status of a taxon or ecosystem type.

State Rank characterizes the relative rarity or endangerment within the state of Washington.

S1 = Critically Imperiled - At very high risk of extirpation in the state due to very restricted range, very few populations or occurrences, very steep declines, severe threats, or other factors.

S2 = Imperiled - At high risk of extirpation in the state due to restricted range, few populations or occurrences, steep declines, severe threats, or other factors.

S3 = Vulnerable - At moderate risk of extirpation in the state due to a fairly restricted range, relatively few populations or occurrences, recent and widespread declines, threats, or other factors.

S4 = Apparently Secure - At a fairly low risk of extirpation in the state due to an extensive range and/or many populations or occurrences, but with possible cause for some concern as a result of local recent declines, threats, or other factors.

S5 = Secure - At very low or no risk of extirpation in the state due to a very extensive range, abundant populations or occurrences, with little to no concern from declines or threats.

S5 = Secure - At very low or no risk of extirpation in the state due to a very extensive range, abundant populations or occurrences, with little to no concern from declines or threats.

SX = Presumed Extirpated - Species is believed to be extirpated from the state. Not located despite intensive searches of historical sites and other appropriate habitat, and virtually no likelihood that it will be rediscovered.

SU = Unrankable - Currently unrankable due to lack of information or due to substantially conflicting information about status or trends.

SNR = Unranked - Subnational conservation status not yet assessed.

SNA = Not Applicable - A conservation status rank is not applicable because the species or ecosystem is not a suitable target for conservation activities.
